phospholipase A2 (EC 3.1.1.4) X - habu
NyAlternate names: phosphatidylcholine 2-acylhydrolase
(Specials: Trimeresurus flavoviridis (habu)
C;Date: 30-Sep-1987 #sequence_revision 30-Sep-1987 #text_change 24-Apr-1998
C;Accession: A25500
R;Kini, R.W.; Kawabata, S.I.; Iwanaga, S.
Toxicon 24, 1117-1129, 1986
A;Title: Comparison of amino terminal region of three isoenzymes of phospholipases A2 (T quence of the basic phospholipase, TFV PL-X.
A;Reference number: A94320; MUID:87179112; PMID:3564060
A;Accession: A25500
A;Molecule type: protein
A;Reference number: A94320; MUID:87179112; PMID:3564060
A;Molecule type: protein
A;Reference number: actalyzes hydrolysis of 1,2-diacyl-sn-glycero-3-phosphocholine to 1-acyl-A;Note: the reaction is strongly enhanced when the phospholipid is condensed into a mice C;Superfamily: phospholipase A2
C;Keywords: calcium; carboxylic ester hydrolase; homodimer; lipid degradation; metallopr C;Superfamily: phospholipase A2
C;Keywords: calcium; carboxylic ester hydrolase; homodimer; lipid degradation; metallopr F;26-122,28-44,43-95,49-115,50-88,57-81,75-86/Disulfide bonds: #status predicted F;47,89/Active site: His, Asp #status predicted

MISCELLANGOUS: Maximally active at neutral to alkaline pH and with
                                 human and mouse cDNA sequences.";

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: PA2 catalyzes the calcium-dependent hydrolysis of the 2-acyl groups in 3-sn-phosphoglycerides. L-alpha-1-palmitcyl-2-linoleoyl phosphatidylethanolamine is more efficiently hydrolyzed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               POTENTIAL.                                                                                                                                                                  than the other phospholipids examined.

CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)0 = 1-
acylglycerophosphochline + a fatty acid anion.

COFACTOR: Binds 1 calcium ion per subunit.
SUBCELLULAR LOCATION: Secreted (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /FTId=VAR 012741.

                                     -!- FUNCTION: PAZ catalyzes the calcium-dependent hydrolysis of the 2-acyl groups in 3-sn-phosphoglycerides. L-alpha-1-palmitcyl-2-linoleoyl phosphatidylethanolamine is more efficiently hydrolyzed than the other phospholipids examined.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pfam; PF00068; phoslip; 1.

Inmunoaffinity purification, partial sequence, and subcellular
localization of rat liver phospholipase A2.";
I. Calization of rat liver phospholipase A2.";
J. Biol. Chem. 264:10008-10014(1999).
J. FUNCTION: Thought to participate in the regulation of the phospholipid metabolism in biomembranes including eicosanoid phospholipid metabolism in biomembranes including eicosanoid biosynthesis: Catalyzes the calcium-dependent hydrolysis of the 2-
Diosynthesis: Catalyzes the calcium-dependent hydrolysis of the 2-
acyl groups in 3-an-phosphocylycerides.
C-: CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)0 = 1-
acylglycerophosphocholine + a fatty acid anion.
C-: SUBCELLULAR LOCATION: Membrane-associated.
C-: SUBCELLULAR LOCATION: Membrane-associated.
C-: SUBCELLULAR LOCATION: Membrane-bound and secreted forms are identical and are encoded by a single gene.
C-: SIMILARITY: Belongs to the phospholipase A2 family.
                                                                 MEDLINE=888007474; PubMed=3654593; MEDLINE=888007474; PubMed=3654593; Hayakawa M., Horigome K., Kudo I., Tomita M., Nojima S., Inoue K.; "Amino acid composition and NH2-terminal amino acid sequence of rat platelet secretory phospholipase A2."; Jule 1900 10:1311-1314(1987).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SUBCELLULAR LOCATION: Secreted. Trissus SPECIFICATION: Secreted. Trissus SPECIFICITY: Expressed at high levels in placenta, testis, thymus and at lower levels in heart, kidney, liver and prostate. SIMILARITY: Belongs to the phospholipase A2 family.
broup IIF secretory phospholipase A2 precursor (EC 3.1.1.4) (Phosphatidylcholine 2-acylhydrolase GIIF) (GIIF spLA2) (spLA(2)-IIF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: PA2 catalyzes the calcium-dependent hydrolysis of the acyl groups in 3-sn-phosphoglycerides. Hydrolyzes phosphatidylglycerol versus phosphatidylcholine with a 15-fold
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BY SIMILARITY.

C. FUNCTION: PA2 catalyzes the calcium-dependent hydrolysis of the 2-catalyzes the calcium-dependent hydrolyzes

C. Stroups in 3-sn-phosphoslycerides. This is sozyme hydrolyzes

more efficiently L-alpha-1-palmitoyl-2-oleoyl phosphatidylcholine, L-catalyzer-1-palmitoyl-2-arachidonyl phosphatidylcholine, L-calpha-1-stearcyl-2-arachidonyl phosphatidylinositol. May be involved in the production of lung surfactant, the remodeling or regulation of cardiac muscle.

C. TATALYTIC ACTIVITY: Phosphatidylcholine + H(2)O = 1-catalyger-ophosphocholine + a fatty acid anion.

C. COFACTOR: Binds 1 calcium ion per subunit (By similarity).

C. SUBCELLULAR LOCATION: Secreted.

C. SUBCELLULAR LOCATION: Secreted.

C. TISSUE SPECIFICITY: Heart, placenta and less abundantly, in lung.

C. PIM: This enzyme lacks one of the seven disulfide bonds found in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SUBCELLUIAR LOCATION: Secreted.
MISCELLUIAR LOCATION: Secreted.
MISCELLANEOUS: Does not bind calcium as one of the calcium binding anscens is lost (Asp.-Lys in position 48).
SIMILARITY: Belongs to the phospholipase A2 family. Group II subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       22 ILNINKMYKQVTGKMPILSYWPYGCHCGLGGRGQPKDATDWCCQTHDCCYDHLKTQGCGI

                                                                                                                                                                                                                                                                                                   Group IIF secretory phospholipase A2 precursor (BC 3.1.1.4) (Phosphatidylcholine 2-acylhydrolase GIIF) (GIIF sPLA2) (sPLA(2)-IIF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Biol. Chem. 274:31195-31202(1999).
FUNCTION: PA2 catalyzes the calcium-dependent hydrolysis of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         acyl groups in 3-sn-phosphoglycerides. Hydrolyzes phosphatidylglycerol versus phosphatidylcholine with a 15-fold preference (By similarity).

-!- CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)0 = 1-acylglycerophosphocholine + a fatty acid anion.

-!- CORACTOR: Binds 1 calcium ion per subunit.

-!- SUBCELLULAR LOCATON: Secreted.

-!- SUBCELLULAR LOCATON: Secreted.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           composed of a single chain.
SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: Expressed by the venom gland.
SIMILARITY: Belongs to the phospholipase A2 family. Group II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            39.4%; Score 335.5; DB 1; Length 138; 46.3%; Pred. CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)0 = 1-
acylglycerophosphocholine + a fatty acid anion.

COPACTOR: Binds 1 calcium ion per subunit (By similarity).

COPACTOR: Binds 1 calcium ion per subunit s: CA and CB. CA is acidic, subunits: Crotoxin consists of 2 subunits: CA and CB. CA is acidic, nontoxic, without enzymatic activity and comprises 3 peptides that are crosslinked by 7 disulfide bridges. CB is basic, toxic, has phospholipase A2 activity and is composed of a single chain.

SUBCELLUIAR LOCATION: Secreted.

SINGELLUIAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                        10 VVMAGVIPIQGGILINLNKMVKQVTGKMPILLSYWPYGCHCGLGGRGQPKDATDWCCQTHDC

                                                                                                                                                                                                                                                                                                                                     -- FUNCTION: Myotoxic protein that lacks PA2 enzymatic activity.
-- SUBCELLULAR LOCATION: Secreted (By similarity).
-- TISSUE SPECIFICITY: Expressed by the venom gland.
-- MISCELLANBOUS: Does not bind calcium as one of the calcium binding ligands is lost (Asp->Lys in position 64).
-- SIMILARITY: Belongs to the phospholipase A2 family. Group II
                                                                                                                                                                                                                                                         novel Lys-49

The present sequence is human phospholipase 2 (HPPL2). This protein is involved in the hydrolysis of membrane phospholipids. The protein and its coding sequence can be used to diagnose and treat the following: cancers such as prostate, breast and testicular cancers, autoimmune and inflammatory disorders such as ALDS, allergies, anaemia, asthma, atherosclerosis, Cronn's disease, diabetes mellitus, emphysema, Graves', disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, psoriasis, rheumatoid arthritis and systemic lupus erythematosus, infection caused by viruses, fungi, bacteria, parasites and protozoa, and reproductive disorders including infertility, disruptions of the menstrual cycle, polycystic ovary syndrome, ectopic pregnancies, disruptions of spermatogenesis, cancers within the reproductive tract and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WVRNQANLDKEQVPLLKIEEPPSTAGRIAEFFTDLLTWRPLAQATHNFLRGLHFHKDYFQ 420

The CDNA clone is isolated from U937 cells. The CDNA clore is active immedrane phospholipid turnover and in regulation of intracellular signalling mediated by the arachidonic acid cascade. The invention describes a method for producing phospholipase enzymes which can be used to identify inhibitors of their function. The inhibitors can used to treat inflammatory disorders such as rheumatoid arthritis, psoriasis, asthma, and inflammatory bowel disease. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                        Calcium-independent cytosolic phospholipase A2-beta; cPLA2-beta; U937 cell; membrane phospholipid turnover; intracellular signalling; arachidonic acid cascade; inflammatory disorder; rheumatoid arthritis; psoriasis; asthma; inflammatory bowel disease; antiinflammatory.

The invention relates to a purified phospholipase enzyme (calcium-independent cytosolic phospholipase A_2-beta enzyme) peptide appearing as ABG76482 encoded by a polynuclectide appearing as ABK118883. The protein has an enzymatic activity in a mixed micelle assay (MMA) with 1-palmitoyl -2- (^1.4C)-arachidonyl- phosphatidylcholine. cpLA2-beta is useful for assaying chemical agents for antiinflammancory activity mediated by the various components of the arachidonic acid cascade. cpLA2-beta is also various components of the arachidonic acid cascade. cpLA2-beta is also are useful in the development of polyclonal and monoclonal antibodies which are useful as research or diagnostic tools, and to study phospholipase A_2 activity and inflammatory conditions. The present sequence represents a partial cPLA2-beta protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                225

The invention relates to a purified phospholipase enzyme (calciumindependent cycosolic phospholipase A.2-beta enzyme) peptide appearing as ABG76482 encoded by a polymucleotide appearing as ABX118883. The protein has an enzymatic activity in a mixed micelle assay (MMA) with 1-palmitoyl-2-(1/4C)-arachidonyl-phosphatidylcholine. CPLA2-beta is useful for assaying chemical agents for antiinflammatory activity mediated by the various components of the arachidonic acid cascade. CPLA2-beta is also useful in the development of polyclonal and monoclonal antibodies which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a novel calcium-independent cytosolic phospholipase A2 (cPLA2)-beta enzyme and the cDNA sequence encoding it. The cDNA clone is isolated from U937 cells. The cPLA2 enzyme is active in membrane phospholipid turnover and in regulation of intracellular signalling mediated by the arachidonic acid cascade. The invention describes a method for producing phospholipase enzymes which can be used to identify inhibitors of their function. The inhibitors can used to treat inflammatory disorders such as rheumatoid arrhritis, psoriasis, asthma, and inflammatory bowel disease. The present sequence represents cPLA2 N-terminal peptide-cPLA2-beta fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            364

This invention describes a novel human phospholipase A2 (PLA2) protein (I) and its encoding nucleic acid. The amino acid (I) releases archidonic acid in specific tissues characterized by unique membrane phospholipids, by generating 19sophospholipid species which are deleterious to membrane integrity or by remodeling of unsaturated species of membrane phospholipids through deacylation/reacylation mechanisms. The therapeutic benefit, such as inhibiting the central role of PLA2 in the inflammatory component of Alzheimer's disease. The amino acid (I) allows sensitive and rapid screening and identification of inhibitors of phospholipase A2. This sequence represents the human PLA2 protein (also known as phosphatide 2-acyl hydrolase)

Comprising a 3085 base pair phospholipase A2 (PLA2) sequence (given in AAF74999), encoding a 913 residue phospholipase A2 protein sequence

Cg (given in AAB74635), or a nucleotide sequence which hybridises under (given in AAB74635), or a nucleotide sequence which hybridises under stringent conditions to the above mentioned mucleotide sequence. Also described are: (1) an isolated polynucleotide (II) comprising an 8517 comprising (I) and an expression control sequence; (3) a host cell transformed with (III); (4) an expression vector (IV) comprising (II) comprising (II) and an expression control sequence; and (5) a host cell cransformed with (IV). (I) is useful for screening compounds which cransformed or transformed or transform
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acid molecules encoding phospholipase A2 enzyme, useful in screening assays for identifying compounds that inhibit or block phospholipase A2 enzyme activity.

RESULT 9

Assays to evaluate the effectiveness of inhibitors of phospholipase A2, used to screen candidate compounds, comprise recombinant expression of novel phospholipase A2.

Claim 1(a); Col 53-58; 32pp; English.

The present sequence is that of a novel human phospholipase A2 (PLA2, also referred to bPLA2 or PLA2-beta). PLA2 liberates arachidonic acid from phospholipids, leading to the production of eicosanoids involved in inflammatory reaction. A claimed assay for evaluating the effectiveness transformed with an expression vector comprising PLA2 genomic DNA ocompound, and determining the PLA2, contacting it with a candidate compound, and determining whether the PLA2 activity has been inhibited. The assay provides rapid and efficient screening for new antinflammatory drugs that inhibit the arachidonic acid cascade. These may be especially useful in the treatment of the inflammatory component of Alzheimer's NAME OF COLORS OF STATES O

Sequence 913 AA;

New crystalline cytosolic phospholipase A2 (cPLA2) for identifying a species which is an agonist or antagonist of cPLA2 activity or binding that can be used to prevent or treat inflammation or inflammatory-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the human cytosolic phospholipase A2 (CPLA2) beta protein. The invention concerns the elucidation of the crystal structure of the protein and its use in drug design. The protein can be used to identify treatments for inflammation-related conditions such as rheumatoid arthritis, psoriasis, asthma, inflammatory bowel disease, and diseases such as osteoporosis, colitis, myelogenous leukaemia, diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          143

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed containing the production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed containing an though techniques to restore normal containing antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in changing contained for genetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity captures or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Abgonollo-Abgonoly represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this prenent did not appear in the printed specification, but was obtained in

                                                                                                                                      ò
                                                                                                                                                                                          ò
                                                                                                                                                                                                                 셤
                                                                                                                                                                                                                                                    The INVERTION TELABES to isolated polymoclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymersae chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a volypeptide in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of supplement. (II) and its binding partners are useful in medical imaging involving aberrant protein expression or biological activity. The polypeptide and polymuclectide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in the wipo int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             11;

This sequence represents a secreted human protein encoded by the gene

CC clone detailed in the descriptor line. The gene can be used to generate

CC clone detailed in the descriptor line. The gene can be used to generate

CC clone detailed in the descriptor line. The gene can be used to generate

CC clone detailed in the descriptor line. The gene can be used to generate

CC clone detailed in the descriptor line. The proventing, treating

CC as compared to the human protein only. The invention relates to 70 novel

CC and locations which the are useful for preventing, treating

CC and sequences AAW3505-W75179) which are useful for preventing, treating

CC and location which closes are described for each of the

CC new polypeptides in a sample or by determining the amount of the

pathological conditions e.g. by protein or gene thrzapy.

CC new polypeptides in a sample or by determining the movel to correct

CC new polypeptides in a sample or by determining the movel to correct

CC new polypeptides in a secreted which tissues they are most highly expressed

CC new polypeptides in a secreted which is such as a secreted on which tissues they are most highly expressed

CC new polypeptides of the described uses). (Updated on 25-MAR-2003 to correct PF field.) (Updated on 25-MAR-20

Human; immunoglobulin G; IgG; fragment of crystallisation; Fc; immune system disorder; haematopoietic cell disorder; inimunologic deficiolency disorder; ataxia telangiectasia; HIV infection; Miskott-Aldrich disorder; thrombocytopenia; haemoglobinuia; haemoglobinuia; blood coagulation disorder; blood platelet disorder; autoimmune disorder;
           close detailed in the descriptor line. The gene can be used to generate clusion proteins by linking to the gene to a human immunoglobulin Rc portion (e.g. AAV34145) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 70 novel genes and their fragments (nucleic acid sequences: AAV34154-V34276; amino acid sequences AAW75057-W75179) which are useful for preventing, treating acid sequences namedical conditions e.g. by protein or gene therappy. Also, or ameliorating medical conditions can be diagnosed by determining the amount of the pathological conditions can be diagnosed by determining the amount of the new polymerlectides. Specific uses are described for each of the 70 polymuclectides, based on which issues they are most highly expressed in (see AAV34154 for described uses). (Updated on 25-MAR-2003 to correct Pf field.) (Updated on 25-MAR-2003 to correct

2003-466138/44. WPI; 2003-466138/ N-PSDB; ACD08035. Novel isolated human secreted HODAZ50 polypeptide useful for diagnosing or treating deficiencies or disorders of the immune system, autoimmune disorders, hyperproliferative disorders, and infectious diseases.

Claim 11; Page 177-178; 243pp; English.

```
the invertion describes an isolated human secreted HoDAZSO polypeptide from the invertion describes an isolated human secreted HoDAZSO polypeptide from polypeptide fragment of any one of the 123 polypeptide sequences of the polypeptide defined in the specification and having biological activity, polypeptide domain or repitope of PS, secreted form of PS, full-length complete in the specification and having biological activity, protein of PS, or variant, allelic variant or species homologue of PS. (I) or a polymucleotide (II) encoding (I) is useful for preventing, or anciprating a medical condition in a mammalian subject. (I) is useful for diagnosing a pathological condition in a subject. (I) is useful for inferity to a pathological condition in a subject. (I) is useful for inferity of the binding partner and determining whether the binding deficiencies of haematopoletic cells, to treat immunologic deficiency disorders of haematopoletic cells, to treat immunologic deficiency disorders, thrombocytopemia or haemoglobinuria, blood platelet disorders, autoimmune disorders are deficiency disorders, brombocytopemia or haemoglobinuria, blood platelet disorders, autoimmune disorders, dermitis, glomerulonephritis, Grave's disease), allergic reactions, cells of the standarder, brome breast, disease, haemolytic anaemia, rhuman or stroke), to capated in the abdomen, bone, breast, disease, and prizated cells reading to the regeneration defected in the abdomen, bone breast, disease, had trained when the abdomen, bone breast, disease, had trained when the abdomen, bone breast, disease, had the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     194
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

Immunologic deliciency disorders, ataxia telangieticasia, his illuction, wiskott-Aldrich disorders, thrombocytopenia or haemoglobinuria, blood coagulation disorders, thrombocytopenia or haemoglobinuria, blood coagulation disorders, blood platelet disorders, autoimmune disorders (e.g., Addison's disease, haemolytic anaemia, rheumatoid arthritis, graver disease), allergic reactions, gratt-versus-host disease, hyperproliferative disorders (e.g., neoplasms located in the abdomen, bone, breast, digestive system, liver, pancreas, bacterial, fungal or parasitic infection), central and peripheral nervous differentiate, proliferate and attract cells leading to the regeneration of tissues to repair. replace or protect tissue damaged by congenital defects, trauma (wounds, burns, incisions, or ulcers) age disease (e.g., suseporosis, periodontal disease, liver failure) or surgery. (I) or (IV) et suseful to modulate mammalian characteristics, to modulate mammalian characteristics, to modulate mammalian storage of energy, to change a mammal's mental state or physical state, or as a food additive or preservative, such as to increase or decrease cy storage capabilities, fat content, lipid, protein, carbohydrate, vitanins, minerals, cofactors or other nutritional components. This is (1) comprising a sequence at least structure an invariant purpreparted from polypeptide fragment of any one of the 123 polypeptide sequences (FS) fully defined in the specification and having biological activity, polypeptide domain or epitope of FS, secreted form of PS, full-length protein of FS, or variant, allelic variant or species homologue of FS. (7) or a polymucleotide (11) encoding (1) is useful for preventing, treating, or ameliorating a medical condition in a mammalian subject. (1) or a polymucleotide (11) encoding (1) is useful for preventing, treating, or ameliorating a medical condition in a subject. (1) is useful for identifying a binding partner and determining whether the binding partner affects the activity of the polypeptide. (1) or (11) is useful for diagnosing or treating deficiencies or disorders of the immune whether halvish disorders at a telangistetala, HIV infection, whether halvish disorders at a telangistetala, HIV infection, Novel isolated human secreted HODAZ50 polypeptide useful for diagnosing or treating deficiencies or disorders of the immune system, autoimmune disorders, hyperproliferative disorders, and infectious diseases. Greene JM; Brewer invention describes an isolated human secreted HODAZ50 polypeptide Carter KC;
